Problem Statement

GOAL: Replace the dull sky with a more appealing one

Requirement: Fully automatic, no cumbersome manual editing

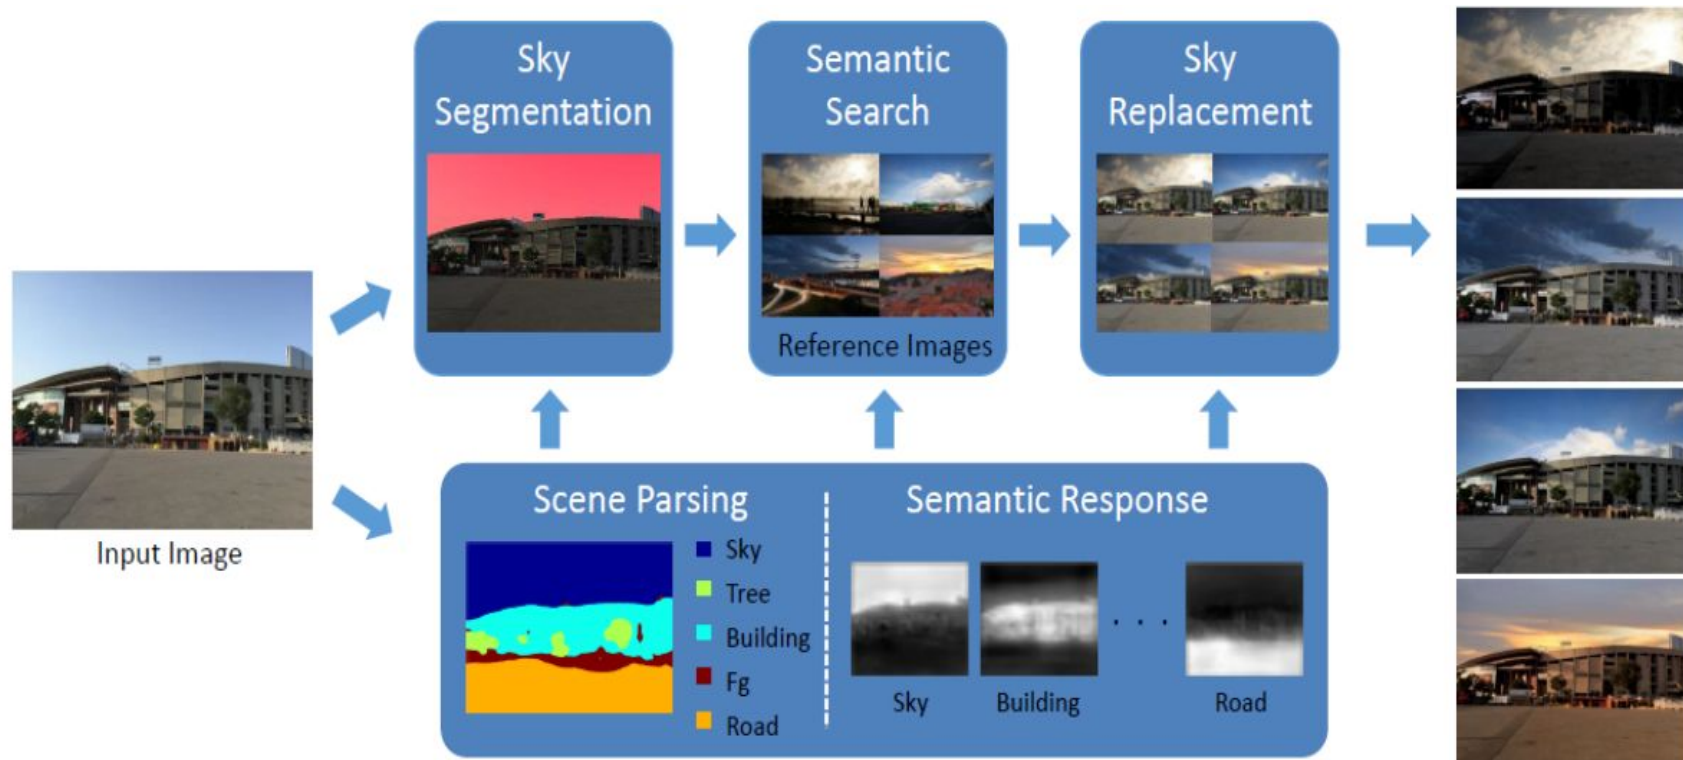

Problem Statement

GOAL: Replace the dull sky with a more appealing one

Requirement: Fully automatic, no cumbersome manual editing

Related Work: Sky is Not the limit [Tsai et al. 2016]

Related Work: Sky is Not the limit [Tsai et al. 2016]

- Color transfer linked with label matching between the source and the target, adds complexity and limitation on source images.
- May also add artifacts in the image.

Related Work: SkyFinder: Attribute-based Sky Image Search [Tao et al]

- Look for compatible skies by entering text and perform a horizon based sky replacement.
- Diversity in options
- Horizon estimation based sky replacement, more errors

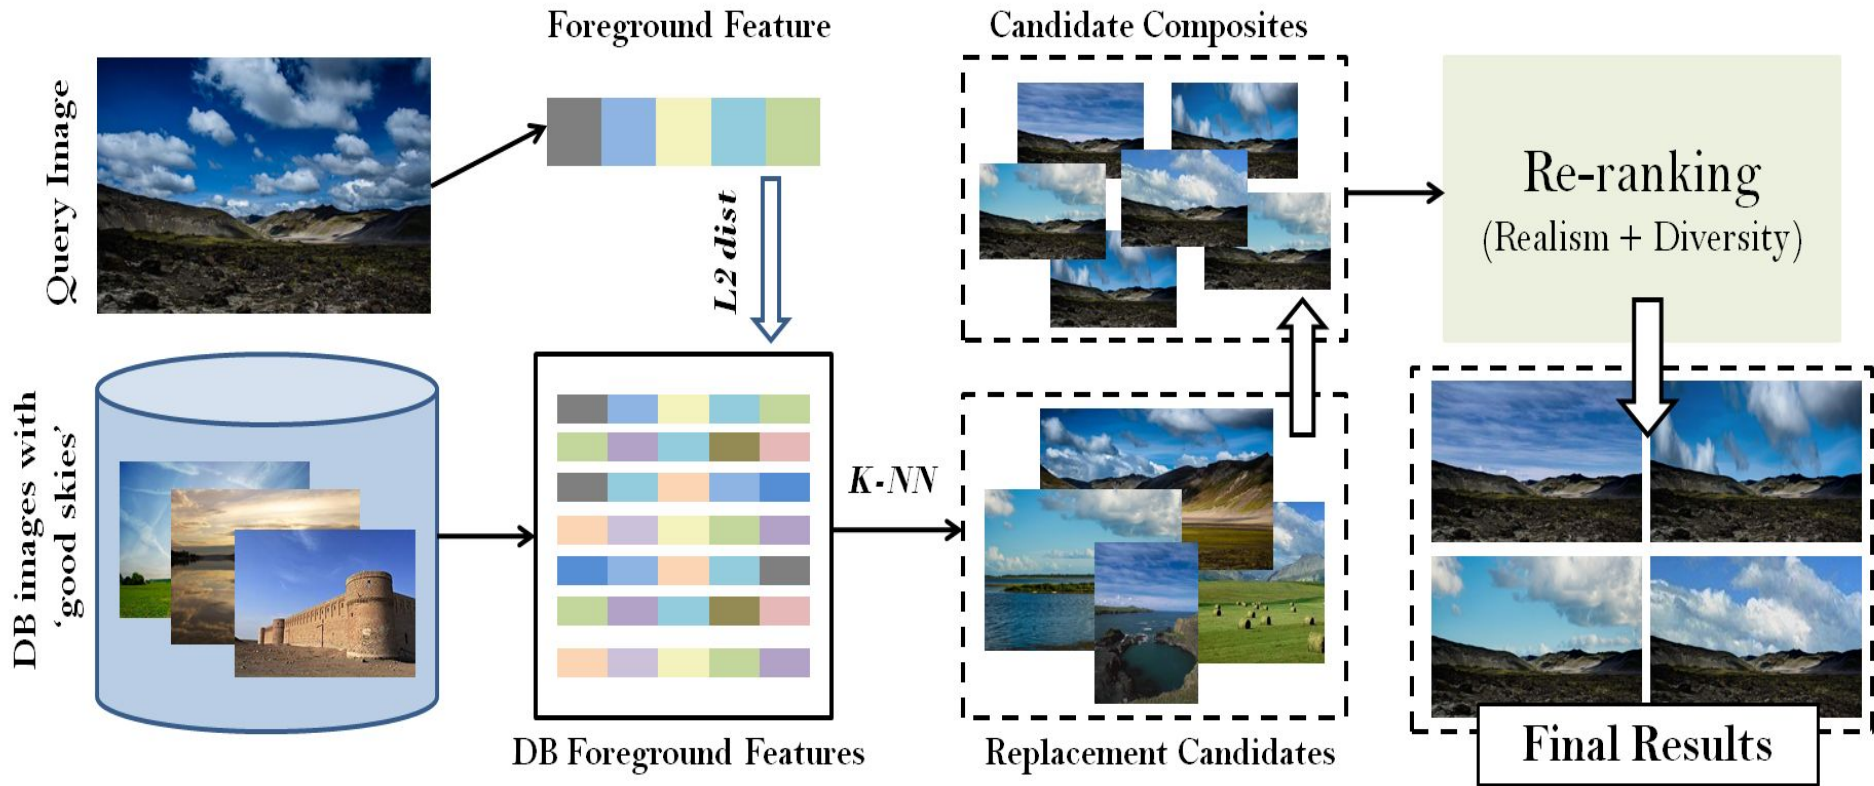

(a) *blue + normal-sky + horizon + R3*

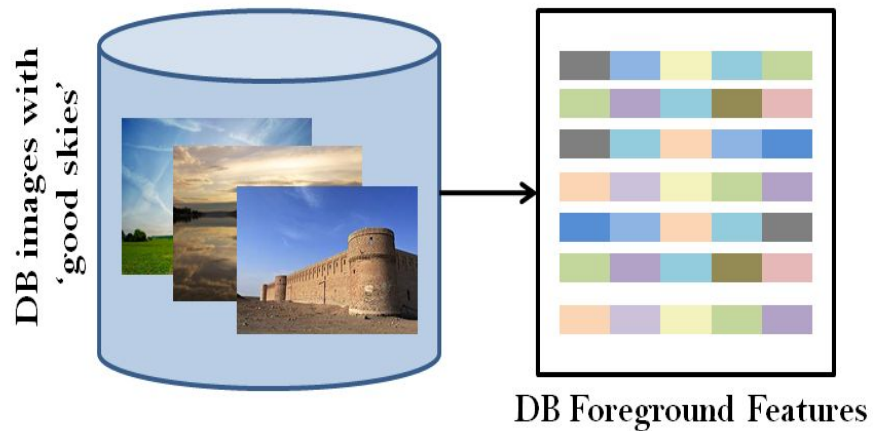

(b) *cloudy + normal-sky + horizon + R5*

(c) *sunset + landscape + horizon + sun*

Pipeline

Pipeline: Preparation of dataset

Pipeline: Preparation of dataset

- Images curated from Flickr(415) and the ADE20K Dataset (831)
- ADE20K:
 - ~6K sky category images
 - Sky region >40% of total image
 - Manually rated between 1 to 5 on interestingness and aesthetic appeal of the skies
 - Average scores higher than 3 were added to the final database.

buildings

Pipeline: Preparation of dataset

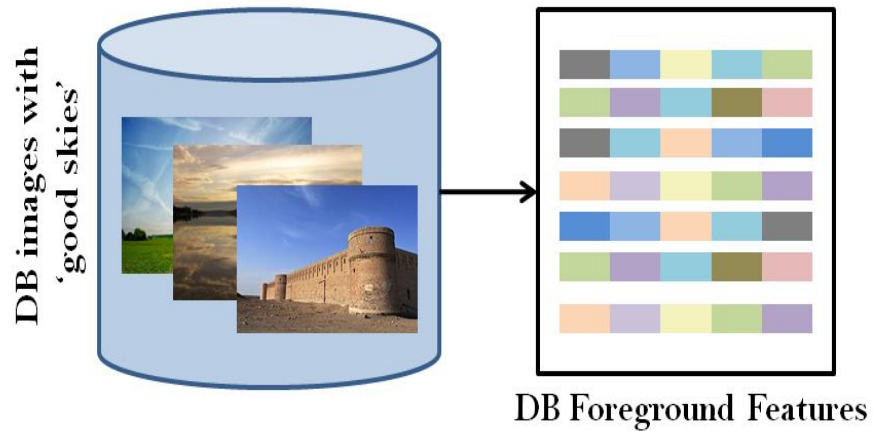

Every image has
a corresponding
mask

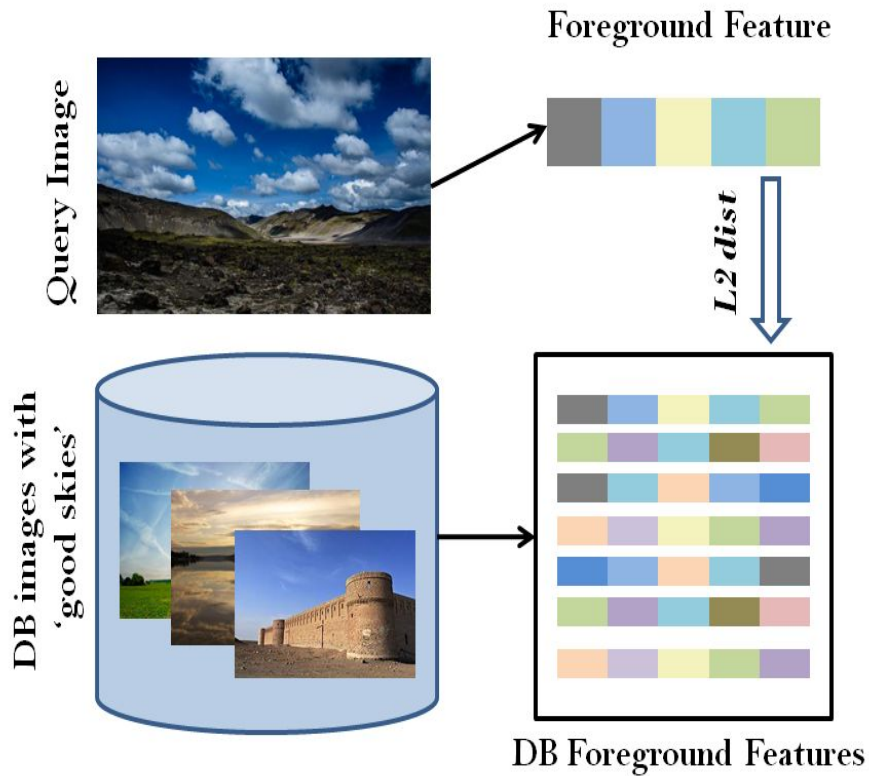

Both given as
inputs

Pipeline: Feature Vector

Pipeline: Feature Vector

Feature Vector

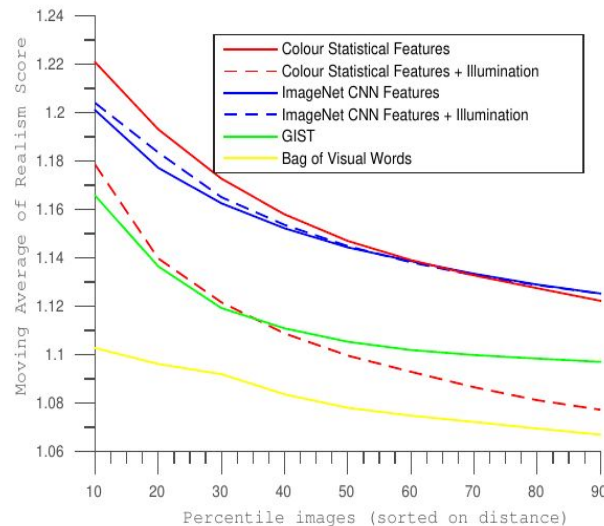

- What features can model the foreground-background relationship?

- Colour statistical features
- CNN
- Illumination
- Bag of visual words
- GIST

- Ablation study

- RealismCNN

- [Zhu et al, ICCV '15]
- Trained using only automatically-generated, composites with artifacts in segmentation and blending algorithms
- VGG model, a 16-layer model with 3×3 convolution filters, fine-tuned on binary classification task

Feature Vector

- What features can model the foreground-background relationship?

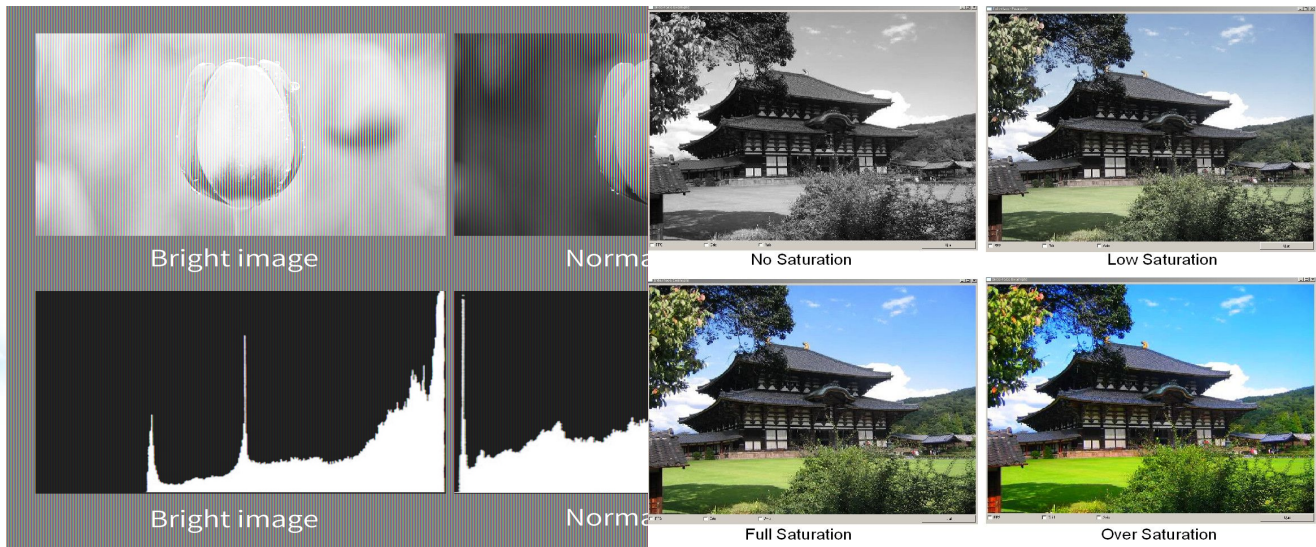

- Colour statistical features
- CNN
- Illumination
- Bag of visual words
- GIST

Feature Vector

Correlated Color Temperature Chart

Feature Vector

- Colour characteristics of light
- Gives a general indication of the apparent "warmth" or "coolness" of the light emitted by the source

$$CCT = 449n^3 + 3525n^2 + 6823.3n + 5520.33$$

$$\text{where } n = \frac{((0.23881)R + (0.25499)G + (-0.58291)B)}{((0.11109)R + (-0.85406)G + (0.52289)B)}$$

Feature Vector

- Amount of energy an observer perceives from a light source
- $\text{Log}_2(Z)$

Feature Vector

- Degree to which a pure color is diluted by white light.
- $\text{Log}_2(S)$

Alternate Features: ImageNet CNN Features

- Pretrained model: VGG19, ImageNet
- Performance close to the best

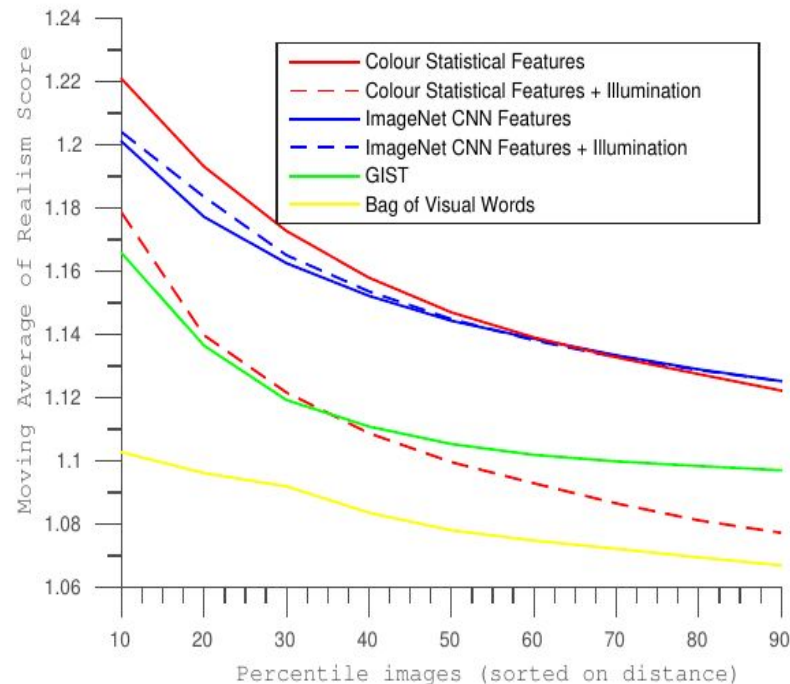

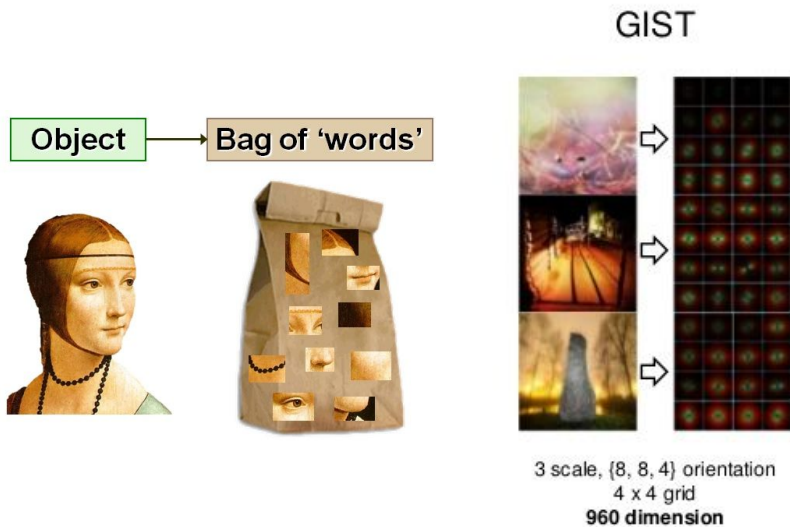

Alternate Features: Illumination Features

$$I = \{\theta_s, \Delta\phi_s, v_s\}$$

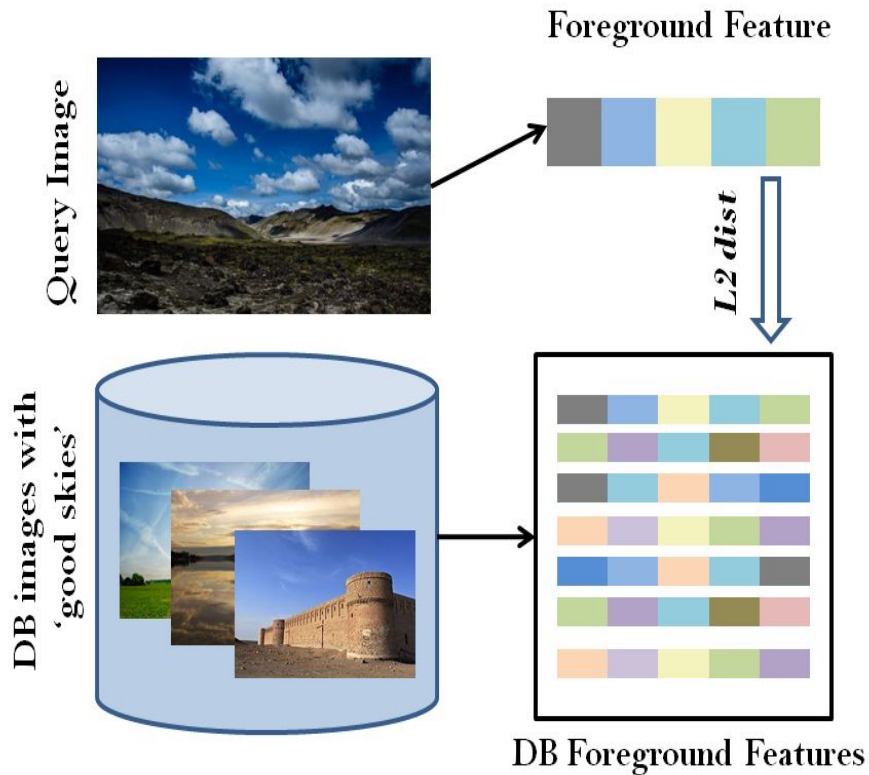

- Approach worked on by [Lalonde et al, ICCV '09]
- Function of sun zenith angle, sun azimuth angle and a binary variable for sun visibility
- Poor performance in ablation study

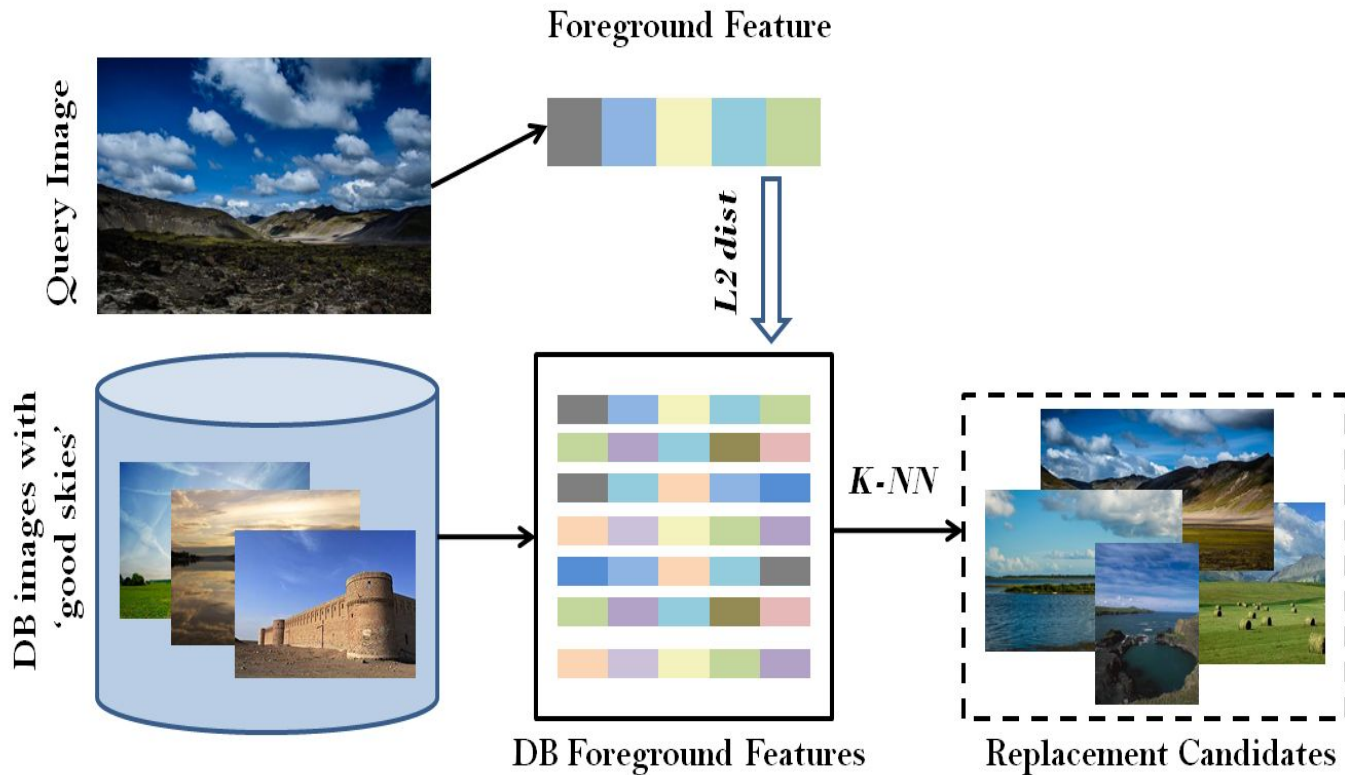

Alternate Features: Bag of Visual Words & GIST

Validation: User Survey

Guideline : Please rate each picture from Very Bad to Very Good for its overall aesthetic appeal.

IMAGE1

☐ Very bad ☐ Bad ☐ Okay ☐ Good ☐ Very Good

IMAGE2

☐ Very bad ☐ Bad ☐ Okay ☐ Good ☐ Very Good

IMAGE3

☐ Very bad ☐ Bad ☐ Okay ☐ Good ☐ Very Good

IMAGE4

☐ Very bad ☐ Bad ☐ Okay ☐ Good ☐ Very Good

Submit Query

Validation: User Survey

- Each image rated by >40 participants aged 20 to 35
- Median score: original image: 2.82 (below 'okay') ; composites: **3.12** (above 'okay')
- **83.33%** composites received a rating > query image

	min	max	mean	median
$\mathcal{R}_q > \text{all } \mathcal{R}_c$	0%	52%	12.72%	8.6%
any $\mathcal{R}_c \geq \mathcal{R}_q$	48.48%	100%	87.32%	91.4%
any $\mathcal{R}_c > \mathcal{R}_q$	10.5%	81.67%	43.38%	43.31%

Limitations

The visual appearance of specular reflections is not accounted for in the feature vector currently.

Limitations

Future Scope

Scope

Also spatial colour properties need to be accounted for in cases such as the following.

Conclusion

- Data driven model for Automatic Sky Replacement
- No need for manual edits
- Images with matching foreground color statistical properties have interchangeable backgrounds

Future Work

- Compatible sky generation by training VAEs.
- Visual feature learning algorithm driven by context-based pixel prediction for sky pixels.

Generate an artificial sky
