IIIT-H to revise MSIT programme

DC CORRESPONDENT
HYDERABAD, SEPT. 13

The Master's in IT (MSIT) Programme at IIIT Hyderabad is set to be restructured as a partly-on-campus online programme with three semesters of coursework followed by one semester of internship or practicum. It will remain a full-fledged master's program with campus placements and industry partnerships. Students can now complete the coursework in one calendar year with reduced tuition, followed by a semester-length internship. Students will also be able to choose a specialization across data science, AI and machine learning, app development (Full-stack), blockchain technologies and information security. Applications to the MSIT Programme will be reviewed and admitted on a rolling schedule after a virtual interview, allowing students to seek admission to the program without any health and safety concerns. Students can apply on the MSIT Program website. Admission dates, course work requirements and other details and specifics can be found at www.msit-program.in. It has also made a few important changes, including staggered rolling admission, online learning, one-on-one personalised mentoring, and personalised examination on demand.
